

INSTRUMENT & CONTROL ENGINEER

Queensland Nitrates Pty Ltd (QNP) operates a state of the art chemical processing plant in Central Queensland. QNP is seeking an Instrument & Control Engineer who wishes to develop their career in a highly motivated team environment.

QNP are currently seeking an Instrument and Control Engineer to join their engineering team. Reporting to the Site Engineering Manager, the purpose of this position is to help the business meet its objectives by providing Instrumentation and Control Systems Engineering technical support and consultancy to Operations, and by identifying, developing and implementing Process Improvements.

Major responsibilities include:

- Implementation of site improvement projects to meet customer requirements.
- Ongoing development of instrument maintenance strategies.
- Providing instrumentation/control systems technical support and training to the Reliability team
- Compliance with Site Risk Management System
- Primary responsibility for ensuring the integrity of the Emergency Shutdown System.
- Ensuring that projects are implemented in accordance with site HSE procedures and requirements.

In order to meet these objectives, you must be degree qualified in a relevant Engineering discipline and have experience in a continuous processing industry. Strong leadership and interpersonal skills as well as the ability to communicate effectively and work within a team environment are essential. Thorough understanding of appropriate environment, safety and management skills is also a requirement.

An attractive salary package together with relocation assistance will be negotiated with the successful candidate, in alignment with qualifications, skills, capabilities and experience.

Applications may be submitted via the website <http://jobsearch.downingteal.com> by entering 105868.
